Excerpt: . . . is projected so as just to clear two walls of equal height a at a distance $2a$ from one another; if the angle of projection be 60° , then the latus rectum of the path is $2a$, and the time of passing between the walls $2a$. 18. In aiming at a mark a projectile falls a ft. short when the elevation is a , and goes b ft. too far when the elevation is 3 . Shew that if the velocity of projection is the same in all cases the true elevation is 19 . A particle is projected from a point P , and when at vertical heights h , h above P is moving in directions making angles $0, 3$ with the horizon; shew that the direction of projection makes with the horizon the angle θ , $K \tan 20 - h \tan 2 - A$ 20. There is a hill whose inclination is 30° . From a point on it one particle is projected up the hill and another down with equal velocities; the angle of projection in each case is inclined to the horizon at 45° ; shew that the range of one projectile is nearly 3 times the range of the other. 21. Smooth particles, starting simultaneously from the highest point of a vertical circle, slide down chords of the circle. If after leaving the chords they move on freely in space, shew that at any subsequent instant they will all lie on the circumference of a circle. 22. A heavy particle slides down...
