Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1907 Excerpt: . of measures, complete in itself, of the satellites and the standard stars, and thus contains measures made in two (or three, if the trails are also measured) different position-angles of the plate-holder. are of the order of magnitude of the sides of the rseau square. The use of the rseau would naturally only eliminate errors due to distortion, which affect equally much larger areas of the plate, and such errors are eo ipso eliminated from the distances of the satellites. The positions of the standard stars, and therefore the scale-value, may, of course, be affected by distortion. Also my original intention was to refer the standard stars to the rseau-lines. This would have necessitated a lengthy and laborious investigation of the errors of the copies of the rseau on the plate, and I have finally abandoned the plan. It is shown in Inclinations and nodes (page 52 and Appendix) that in the position-angles of the standard stars and the measures of the trails no distortion can be detected. There is thus sufficient reason to believe that also the distances of the standard stars cannot be affected by it, and it seems very probable that the use of the rseau would have introduced larger errors than it was intended to remove. The measures were made from 1905 May 9 to June 7. They are given in Table XII. The column headed Position angles gives the readings of the position-circle microscopes, the mean of the two...
